

TOP TIPS

COBALT CARBON FREE

YOUR ROOF

Your roof plays a vital role in protecting your home, enhancing energy efficiency, and improving your home's value. Whether you're considering solar panels, repairs, or a complete roof replacement, here's what you need to know.

01 SOLAR PANELS

Solar panels are a great way to reduce your energy bills and carbon footprint. By generating renewable energy year-round, they add value to your home and help you become more self-sufficient.

Why Install Solar Panels?:

- Lower your energy costs
- Reduce your carbon emissions
- Increase your home's value

Things to Consider: Ensure your roof is in good condition before installation

- Check if your roof gets enough sunlight throughout the day
- Research government incentives and grants available for solar panel installation

02 ROOF REPAIRS & OVERHAUL

Roof repairs or an overhaul may be necessary if your roof is showing signs of wear or damage. Addressing these issues early can extend the life of your roof and save you from needing a complete replacement.

Signs You Might Need Roof Repairs or an Overhaul:

- Missing, cracked, or loose tiles/slates
- Leaks or damp patches inside the attic
- Damage to the flashing around chimneys or vents
- Your roof is more than 10 years old and hasn't been maintained

Benefits of Roof Repairs or an Overhaul:

- Protects against leaks and water damage
- Enhances your roof's insulation and energy efficiency
- Extends the overall lifespan of your roof
- Saves money by avoiding a complete replacement

03 A NEW ROOF

In some cases, a full roof replacement is the best option, particularly if your roof is old, severely damaged, or beyond repair. A new roof improves your home's protection, energy efficiency, and appearance.

When to Consider a New Roof:

- Your roof is 20-30 years old
- Widespread leaks or significant structural damage
- You want to modernise your home's look and improve efficiency

Benefits of a New Roof:

- Maximum weather protection and durability
- Significant energy savings with modern materials
- Increases your home's value and curb appeal

For a warmer, more energy-efficient home that's healthier, quieter, and kinder to the environment, insulation is a smart investment. Contact Cobalt Carbon Free today to find out how we can help transform your home with our high-quality, eco-friendly solutions!
